Pro Latch – Battery De-Sulphation + Maintenance Device

The **ProPulse** is designed to connect to a 12V battery bank. This unit reverse feeds a small electrical pulse back into the battery which prevents and also reverses sulphation of the battery plates. This keeps the battery fresh and responsive to charging and discharging.

The **ProPulse** is not required if you have a Pro Digital battery charger or any other advance Sterling charging product as they have de-sulphation cycles already built into their software program.

- ✓ Connects directly to battery
- ✓ No external power source
- ✓ Reverse feeds high frequency pulse
- ✓ Battery to blow sulphate off the plates
- ✓ Prolongs battery life by up to 100%
- ✓ Rejuvenates older batteries
- ✓ Sharpens battery response to accept faster charge
- ✓ Preserves cold start performance
- ✓ Suitable for use on all vehicles & boats
