Sterling Power Products, Pro Charge Ultra (12 V, 60 A)

## Setting battery charger

- ▶ Use **battery charger** for charging.
- ▶ **The lithium-ion battery must always be charged with a charging voltage up to 14.8 V.**  
Do not exceed the specified voltage value.
- ▶ The battery type (lithium-ion) must be set on the battery charger.  
Before charging, check the setting parameters on the battery charger and adapt if necessary.  
Use the operating instructions for this.
- ▶ Charge the lithium-ion battery until the charging current is < 5 A.
- ▶ The following applies to work, testing or workshop visits:  
connect a battery charger with a nominal current of at least 50 A to the external battery charging plug.
